

Sanitation...Supplies

Quality, well maintained equipment is a crucial part of a successful dairy operation but it is only part of the "complete package" the dairy professionals of Automated Dairy Systems has to offer. Other areas of concern that our team can help you with include milk systems sanitation, animal hygiene and overall sanitation procedures, monitoring and troubleshooting. Give us a few minutes and let us show you the possibilities.

"Pro-Milk Specialist" is a designation your dairy sanitation and supply representative obtains as he studies and trains on the various aspects of equipment and animal hygiene. A combination of formal and field training in such areas as cleaning your milk harvesting/transport systems, mastitis control and maintenance of bacteria levels allow your *"pro-milk specialist"* to best assist you in assuring milk quality and system efficiency.

Sanitation Program performance and efficiency are key components in any new construction or parlor re-model project we undertake. Sanitation systems and programs are designed to best fit your operation and management flow and when the project is complete we will work with your key people to optimize system operations and procedures.

Parlor Audits can be performed in existing operations if system or animal sanitation has become a problem or if you just want to optimize a system that is already in place. By observing and testing your current system we can make recommendations on ways to improving it's performance. We may make recommendations in possible procedural changes with your existing systems or show you how we can help by upgrading or repairing worn equipment.

Chemicals and Supplies are monitored and delivered to your facility by your route representative. We stock and sell products that we have found to be the best on the market and customize a product mix to best fit your operation. We maintain a large warehouse and monitor inventory levels to help assure that you never run out. Several products are manufactured locally in our FDA approved facility to reduce cost and guarantee you a quality product. These products are mixed and tested to conform to tested formulas that have been proven effective over and over again.

**Performance First
Innovation Foremost
Quality Always**

Automated Dairy Systems gave us a solution to wash problems that has resulted in consistent cleaning and ease of operation. We would recommend the COMMANDER SERIES WASH CONTROLS to anyone. The installation was thorough and follow-up issues were promptly resolved. We were very happy with the work they did. - *Robby and Jerry Withers - New Plymouth, Idaho*

"The Dairy Professionals"

Design.....Installation.....Service.....Maintenance

"We've worked with Automated Dairy Systems for quite awhile; they've done our service work for years. We got the equipment we wanted and we were confident with their installation crew. We upgraded to nicer stalls which made installation easier and went from a Double-16 herringbone to a Double-25 parallel!"
— Dan Van Grouw, Nampa, ID

"With these new WestfaliaSurge take-offs, we're seeing SCC's go down and cows being milked out better. We've worked with Automated Dairy Systems for 10 years or so, and they've always done good work for us."
— Steve Wybenga, Burley, ID

"This new parlor has worked right from start-up, with no problems whatsoever. Automated Dairy Systems has been real good to us – service calls, night calls, whatever – they are very professional."
... Brandon Whitesides - Rupert, Idaho

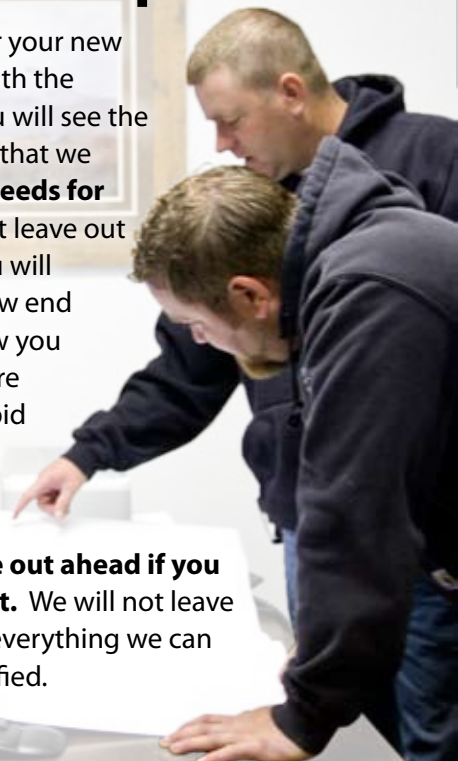

The Complete Package...

From Start to Finish

(batteries included)

110 % Complete

When we present a bid for your new facility, we present you with the **"complete" package**. You will see the systems and components that we feel will **best meet your needs for the long haul**. We will not leave out systems that we know you will want to add later or bid low end components that we know you will want to upgrade before the job is complete. Our bid may be a little higher than others to start with but our past experience has shown that **you will come out ahead if you let us do what we do best**. We will not leave a job until we have done everything we can to make sure you are satisfied.

Professional Grade

All of the Automated Dairy Systems personnel involved in your project are **craftsmen in their trade** and we give them the tools they need to **do their best**. Whether we are doing the initial design work, installing the milk pipeline, welding the stalls or wiring and testing the automation systems **we make sure we can be proud of our work before we walk away**. We work with your general contractor and others involved in the project to make sure you end up with the **professional, industrial grade installation** you need to be successful in this rewarding and yet demanding industry.

Performance Optimized

Automated Dairy Systems has been doing this a long time and we have completed a lot of installations of many sizes and complexity. This experience has given us the opportunity to develop techniques and practices that allow us to complete an installation that **maximizes throughput and minimizes downtime** for your dairy operation. Sometimes it is the little things that make the difference and by making little changes in system layout or integrating custom components we can **maximize your system's performance** and when it comes right down to it - **'time really is money'**.

Service Friendly

We are a **full service** organization and we intend to service what we install. For both yours and our own benefit, we make sure that our installations are **'service friendly'**. This means that we do our best to make sure that systems are accessible and can be repaired, replaced or modified with **minimal expense or downtime**. From initial design to final installation we make sure that all system components are installed in a logical manner allowing for future access and maintenance. This allows us to **keep your operation maintained and operating efficiently**.
